Novasphere Dynamics - Autonomous Robotics Safety & Deployment Brief

Document ID: SAF-2026-B | Classification: Executive Compliance (role='executive')

1. Purpose & Scope

This safety brief defines mandatory field commissioning rules for autonomous mobile robots (AMRs) and automated warehouse drones connected to Novasphere OS.

2. Physical Safety Perimeter & Hardware E-Stop

During active commissioning, personnel must maintain a minimum 3-meter safety perimeter around active AMR zones. Every robotic unit must carry a dual-channel hardware Emergency Stop (E-Stop) rated to SIL-2 / PLd compliance standards.

3. Wireless Kill-Switch & Telemetry Watchdog

If telemetry heartbeat packets drop for more than 250 milliseconds in a shared human-robot aisle, the onboard safety controller triggers an automatic Category-1 controlled deceleration stop within 1.2 meters of travel.

4. Executive Incident Escalation & Audit Retention

Any near-miss safety event must be escalated to the Chief AI Ethics Officer (Dr. Elina Vance) and logged in the immutable compliance ledger within 4 hours. Confidential quarterly safety audit reports are restricted exclusively to role='executive'.
